

## Installation Instructions for KPMI Part No.: 80-83000 2016-'23 • Yamaha • YXZ1000R Cylinder Head Service Kit

This kit is verified for the model year range listed above. Certain components in this kit may have larger coverage and are labeled accordingly.  
 When installing KPMI Cylinder Head Service Kits it is important to maintain these highly stressed components in accordance with factory service limits. Always consult with qualified professionals suited to inspect your machine.

### A) 80-83000 Kit Includes:

KPMI P/N	QTY	Description	Specification
<b>80-82950</b>	1 Set	Spring Kit	Includes: HT Steel Retainers, CrSi Valve Springs, HT Steel Basewashers
<b>71014-12</b>	12 Pcs.	Viton Valve Stem Seals	4.5mm Red Viton Seals*
<b>80-81312</b>	6 Pcs.	Intake, Standard Valve	Valve • Black Diamond™ • Black Nitroleg Stems
<b>80-81316</b>	6 Pcs.	Exhaust, Standard Valve	Valve • Black Diamond™ • Black Nitroleg Stems
<b>80-81320</b>	12 Pcs.	Intake / Exhaust, Standard Valve Guide	Valve Guide • C630 Bronze
<b>80-82091</b>	1 Set	Gasket Kit	Includes: 82.5 mm Head Gasket (1), Valve Stem Seals (12), Engine Case Gasket (1), Exhaust Gasket (3), O-Ring (1), Copper Washer (1)

\* NOTE: It is important to use the valve stem seals included in the KPMI labeled bags. These valve stem seals are designed for specific compatibility with the KPMI spring kit. The COMETIC® gasket kit may contain additional valve stem seals, however these should NOT be used with the KPMI spring kit and can be discarded.

### B) Recommended Installed Height - Intake / Exhaust

- |                                       |                      |
|---------------------------------------|----------------------|
| 1. Installed Height .....             | <b>1.315"-1.325"</b> |
| 2. Seat Pressure .....                | <b>55 lbs</b>        |
| 3. Open Pressure at 0.330" lift ..... | <b>139 lbs</b>       |
| 4. Open Pressure at 0.430" lift ..... | <b>165 lbs</b>       |
| 5. Max Valve Lift .....               | <b>0.430"</b>        |

### C) Notes:

- The difference between the installed height and the coil bind height is considered "Free-Travel"

*The coil bind height is determined by compressing the spring(s) with the Retainer and Basewasher in place (a vice can be used for this operation). Once springs are compressed, measure the distance between the Retainer and Basewasher where the Outer Spring contacts them.*

- Free-travel should always be gross valve lift +0.060" for safe operation.
- Retainer-to-Seal / Guide clearance should also be gross valve lift +0.060" for safe operation.
- Failure to check valve train clearances can result in serious damage to an engine

# TECH TIPS

Figure 1

## Valve Train Terminology

1. Stem Protrusion is measured from the tip of the valve stem to the cylinder head. See Figure 1.
2. Outer spring installed height is measured where the outer spring contacts the Retainer and Basewasher when assembled (See Figure 1).
3. Inner spring installed height is measured where the inner spring contacts the Retainer and Basewasher when assembled (See Figure 1).
4. Retainer-to-Guide clearance is the distance between the Valve Guide (w/o the seal) and the bottom of the Retainer, with the Valve in the closed position (See Figure 1 and Notes 3 & 4).
5. Retainer-to-Seal clearance is the distance between the Valve Stem Seal and the bottom of the Retainer, with the Valve in the closed position (See Figure 1 and Notes 3 & 4).

Figure 2

Figure 3

## Installed Height

1. In Figure 2 the installed height is measured from where the Outer Spring contacts the Retainer and the Basewasher. This measurement is taken when the Valve, Basewasher, Retainer, and Keepers are assembled in the cylinder head.

## Coil Bind / Solid Height:

1. In Figure 3 the coil bind height is determined by compressing the Spring(s) with the Retainer and Basewasher in place (a vice can be used for this operation). Once springs are compressed, measure the distance between the retainer and basewasher where the Outer Spring contacts them.

## Notes:

1. The difference between the installed height and the coil bind height is considered "Free-Travel"
2. Free-travel should always be gross valve lift +0.060" for safe operation.
3. Retainer-to-Seal / Guide clearance should also be gross valve lift +0.060" for safe operation.
4. Failure to check valve train clearances can result in serious damage to an engine.
